

Title: Statistics Clinic

Authors: Alan H. Feiveson, Millennia Foy, Robert Ploutz-Snyder, James Fiedler

Venue: HRP Investigators Workshop, Moody Gardens Hotel, Galveston, TX

Dates: Feb 11-13, 2014

ABSTRACT

Do you have elevated p-values? Is the data analysis process getting you down? Do you experience anxiety when you need to respond to criticism of statistical methods in your manuscript? You may be suffering from Insufficient Statistical Support Syndrome (ISSS). For symptomatic relief of ISSS, come for a free consultation with JSC biostatisticians at our help desk during the poster sessions at the HRP Investigators Workshop. Get answers to common questions about sample size, missing data, multiple testing, when to trust the results of your analyses and more. Side effects may include sudden loss of statistics anxiety, improved interpretation of your data, and increased confidence in your results.
